Standard 1 Clinical Governance
All new staff have attended orientation
All staff are wearing visible ID/Name badge
All staff have completed the relevant mandatory training and records are available
All staff have had an annual Performance Development Plan discussion in the last year and loaded via PDP portal
Staff know how to access peer support or the Employee Assistance Program
Staff know how to escalate behaviours of concern through the EMPOWIR process
Clinical documentation includes time, date, signature, name and designation
Clinical notes/histories are stored to protect patient privacy
Consumer records are maintained according to privacy policy and not on display or visible on screens (WOWs), including when a patient is transported
You are confident that no unauthorised person/s could access consumer records
'Live Best Care' & 'Know Your Standards' (including Comprehensive Care) WeLearn packages are completed by all staff
Team meetings are held monthly and minutes are distributed to all staff
All clinical incidents are discussed at ward/area meetings
Staff huddles are used to share information about consumer safety
Departmental quality activities are listed on new Best Care Improvement Activity Template
Departmental quality activities are recorded on new WH Improvement Register
All staff are aware of top 3 risks in the area and know the initiatives implemented to improve results

Standard 1 Clinical Governance	
All staff have current access and know how to enter or report all incidents, hazards and 'near misses' on RiskMan	
All staff are aware of Live Best Care site and Best Care reporting structure at their Divisional level	
All staff can state what Best Care means at Western Health	
Your area participates in local safety initiatives and staff can provide examples	
Defibrillator checked daily, where applicable	
Resuscitation trolley, emergency equipment is checked according to schedule and documented on checklist as per PPG	
Blood Glucose and hemocue machines checked and calibrated and recorded on schedule, where applicable	
All biomed equipment including hoists and iStat machines are maintained and have an in date biomedical sticker	
Body protection area has an in date biomedical sticker	
All chemicals and cleaning products are stored in locked cupboard	
All oxygen cylinders are stored securely and are off the floor	
Emergency exits and fire equipment are free from clutter	
Emergency exit lights are working	
Fire Evacuation Plan is in date and documented on the plan	
Tagging and testing completed for all electrical items	
Weighing scales have been calibrated	
All staff are aware of organisation wide audits and schedule on Audit Portal	

Standard 1 Clinical Governance
Department/Ward/Area is free from clutter and unwanted equipment and furniture removed

Standard 2 Partnering with Consumers
Consumers are informed of their healthcare rights and responsibilities and the Australian Charter of Healthcare Rights is visible to consumers
Consumer communication boards are up-to-date and consumers are involved in care planning and decision making
All consumer information brochures are approved by the Consumer Advisory Group and in date
Consumer information brochures are available and kept tidy; staff are aware of consumer brochures available on the intranet
Consumers/carers are encouraged to provide feedback on their experience of our healthcare service and all staff are able to direct consumers on how to provide feedback
All staff can describe how they have involved consumers in their care
Where applicable, staff check the patient ID at change of shift and handover using 3 points of identification and thereafter as per PPG
All staff introduce themselves "Hello My Name Is"
Staff know where to direct consumers/carers regarding the Freedom of Information process
'Welcome to ward/department/area' is displayed with leadership team pictures
KHWDB is up-to-date
Staff are familiar with About Me forms
All staff have completed Aboriginal Cultural Safety Training

Standard 2 Partnering with Consumers	
	All inpatients are wearing correct identification arm bands
	Don't be shy, identify! poster is on display

Standard 3 Infection Prevention	
Hand hygiene compliance audit results are posted and actively followed up as required; an action plan is in place if audit results are below target.	
Staff are aware of the 5 moments of hand hygiene	
Cleaning schedules are posted and checklists indicate all cleaning has occurred (including medication storage areas, stock rooms, trolleys, medication fridges and staff fridge)	
Clear delineation between clean and dirty zones in Dirty Utility	
Single use equipment is not reused or reprocessed	
Hand sanitiser is available at the end of each bed, near linen trolley and sterile stock rooms, and at the entrance to the ward area; hand sanitiser is 'in date' in all holders, dispensers are clean	
PPE is available	
Linen - clean and dirty linen is appropriately separated, no linen on the floor, bags not over-filled. Clean linen trolleys are covered and hand rub is readily available and used prior to accessing linen	
Linen is to be stored on clean shelves, protected from contamination from dust, and in a manner that allows stock rotation	
Linen skips are available and there is no linen or clothing on the floor	
Metal trolleys are available for clinical procedures (no painted surfaces)	
Minimal equipment in corridors	

Standard 3 Infection Prevention
No holes in walls, exposed wires or frayed electrical cords are visible; if so, a PULSE job is logged for repairs
Old, unused and broken equipment has been disposed or a PULSE job is logged
Patient areas and surfaces are clean, clear and decluttered at all times
Remove any tapes\adhesives stuck to trolleys and equipment
Sharps bins are appropriately secured and off the floor
Sterile stock is stored approximately 250mm from floor and 440mm from ceiling and allows cleaning of room without damage to items. Hand sanitiser is readily available for staff to perform hand hygiene prior to accessing sterile stock.
Sterile stock is stored separately from non-sterile stock
Storage areas are tidy with no stock items in cardboard boxes or stored on the floor or close to ceiling lights; hoist slings are stored neatly and labelled as clean
Tag (Clinell green tape) all cleaned equipment that is either stored on the ward or being returned to CEL/engineering
All shared equipment is cleaned between use and tagged as clean before returned to storage, including hoist slings
The 5 moments of Hand Hygiene signs are visible above all hand wash basins
Mollicare products are not shared and individually labelled with consumer name and sent home with consumer on discharge
Air mattresses are cleaned according to PPG
All waste is appropriately segregated and stored
Remove unnecessary posters from wall; notices dated more than 6 months should be considered.

Standard 3 Infection Prevention
Cupboards and workstations free of unnecessary or broken equipment/folders/paperwork and clean and tidy
Food fridge temperature is monitored daily for the last month
Food in fridges is removed from cooler bags and food is clearly dated, and stickers are available to label food
Food fridges are cleaned as per schedule and no out of date food is present
All staff comply with 'no more on the floor'
All Staff are 'bare below the elbow' and are not wearing enhanced nails (gel, acrylic, or other)
No staff food or drinks in clinical areas (except in break rooms) including not on WOWs
WOWs are cleaned including free of sticky adhesives and residues. WOWs are not used for any aseptic procedure.
All WOWs are cleaned at each handover and contain hand sanitiser and clinell wipes
Transmission based precaution signs are appropriately displayed outside patient rooms/cubicles

Standard 4 Medication Safety	
Current medication information resources are readily available (hard copy OR computer access) including injectable Drugs handbook 7 th Edition (yellow book) and Don't Rush to Crush Handbook 3 rd Edition (blue book).	
Schedule 8 and 11 medications signed into register by 2 staff members	
Signature register available and updated for all nursing and midwifery staff accessing S8/S11 medications	
Staff are aware of their responsibilities with medication administration including how to record lines and devices in EMR and how to create an order for ongoing assessment	

Standard 4 Medication Safety	
Medication fridge temperature is monitored daily, twice daily if used for vaccination storage (if not centrally monitored)	
Medication fridge only used to store medications	
Medication fridge cleaning schedule available and has been cleaned in the last month	
All medication drawers, the Schedule 8 safe, Schedule 11 cupboard and Medication Room are locked	
Mortal and pestles are used with patty pans/muffin liners	
Medication preparation areas have adequate lighting, are free from clutter, isolated and free from distractions	
WOW medication drawers/medication carts are locked at all times	
System in place to record allocation of WOW keys	
Staff are aware of requirement for labelling IV lines	
Staff are completing Medication Reflection Tools for all medication errors	
Monthly audits are completed for Schedule 8 and Schedule 11 medications	
Staff are reviewing consumer allergies each admission and checking prior to medication administration	
Appropriate bins are used for medication waste and liquid preparations	
Staff know how to document and report an Adverse Drug Reaction	
Staff know APINCH acronym	
Medication incidents are discussed at ward/department meetings with an action plan in place	
Staff are removing ceased or expired medications from WOWs or patient bedside drawers	

Standard 4 Medication Safety
Staff are aware of any quality improvement projects related to medication safety

Standard 5 Comprehensive Care	
Evidence of bedside safety checks in place	
Bedside magnet boards are utilised and up-to-date displaying accurate consumer information	
Staff have completed Pressure Injury Prevention (PIP) WeLearn module and can demonstrate PIP strategies	
Staff have completed Falls Prevention WeLearn module and can identify suitable fall prevention strategies relating to risk factors	
Staff have completed Malnutrition WeLearn module and can demonstrate how to enter a diet code and add additional diet modifiers (i.e. HEHP for MST>2)	
Staff have completed Suicide and Self Harm for nursing/allied health we Learn module	
Staff have completed Delirium WeLearn module and can discuss delirium prevention strategies	
Staff have completed the OVA WeLearn module	
Staff have obtained consent for Portable Video Monitoring, and can demonstrate where this is ordered and recorded in the EMR	
Staff are able to identify and correctly complete screening tools for EOLC, Suicide and self - harm, Advance Care Planning	
Staff know how to document Advance Care Plan/Directives in EMR, add an alert, and describe where the Advance Care Plan/Directive is located in the consumers medical record	
Staff conduct comprehensive assessments and action their findings – i.e. comprehensive assessment and completion of the PHQ2 indicates low mood – escalate to HMO +/- clinical psychology	
Staff know how to document restrictive practices	

Standard 5 Comprehensive Care	
	Nursing staff are using MPage Nursing Shift Note to document variances to nursing care plan each shift to improve communication to the team
	Staff ensure About Me form is completed for all adult consumers, and information provided is reviewed each shift.
	Staff are using the About Me form to create individualised Behaviour Safety Support Plans (BSSP) for consumers at risk of Behaviours of Concern (BOC)
	Staff can initiate and modify the Comprehensive Care Interdisciplinary Plan of Care (IPOC) including, update, modify and discontinue tasks, and generate orders in the Comprehensive Care IPOC or complete comprehensive care paper-based risk assessment and create comprehensive paper-based care plans (BMM)
	Staff are familiar with post fall management and initiate post fall IPOC as required.
	Staff are aware of referral processes and available consultancy services i.e. Palliative Care CNC, Delirium CNC, Pain CNC, CL Psychiatry, OVA Consultant
	Staff are aware of the falls rate and PI rate on their ward – can talk about the falls champion and PIP champion program
	Staff provide tailored consumer education discussing identified risks and strategies consumers can do to stay safe in hospital.
	Staff know how to access Interpreter Services
	Standard 6 Communicating for Safety
	Weekly Safety huddles are held at the KHWDB
	Staff have completed EMR training modules
	ID wrist bands are present on all inpatients
	Bedside communication boards are up-dated each shift

Standard 6 Communicating for Safety		
	Handover is completed at the bedside with consumers if appropriate	
	Staff use the Ward Overview page in EMR and action discrepancies	
	Staff use ISBAR as the WH standardised handover tool	
	Staff acknowledge handover process using EMR each shift	
	All staff only use organisation approved communication devices, applications and tools	
	Handover tools with consumer identifiers are kept confidential and consumer details are not visible to the public	
	Multi-disciplinary teams are reviewing Continuous notes and MPage Nursing Shift Note	
	Standard 7 Blood Management	
	No blood products are stored in ward or medication fridges	
	No blood products are stored in ward or medication fridges	
	No blood products are stored in ward or medication fridges Blood products that are no longer required are not left by the patient's bedside (or on WOWs)	
	No blood products are stored in ward or medication fridges Blood products that are no longer required are not left by the patient's bedside (or on WOWs) Blood buckets are cleaned and available and all staff are aware of storage location Staff collecting group and hold & cross match are labelling blood tubes and request forms at	
	No blood products are stored in ward or medication fridges Blood products that are no longer required are not left by the patient's bedside (or on WOWs) Blood buckets are cleaned and available and all staff are aware of storage location Staff collecting group and hold & cross match are labelling blood tubes and request forms at the bedside and verbally performing positive patient identification prior to collection	
	No blood products are stored in ward or medication fridges Blood products that are no longer required are not left by the patient's bedside (or on WOWs) Blood buckets are cleaned and available and all staff are aware of storage location Staff collecting group and hold & cross match are labelling blood tubes and request forms at the bedside and verbally performing positive patient identification prior to collection Staff are sighting an original valid blood consent prior to proceeding with administration	
	No blood products are stored in ward or medication fridges Blood products that are no longer required are not left by the patient's bedside (or on WOWs) Blood buckets are cleaned and available and all staff are aware of storage location Staff collecting group and hold & cross match are labelling blood tubes and request forms at the bedside and verbally performing positive patient identification prior to collection Staff are sighting an original valid blood consent prior to proceeding with administration	

Standard 8 Recognising & Responding to Acute Deterioration
Staff complete risk assessments including 4AT, suicide and self harm
All staff can explain call for help escalation processes and procedures
Call for help posters are on display
