

2020-2025

# Sustainability Plan

This plan is the result of extensive work liaising, planning, researching and delivery of a project which aims to set Western Health in a leadership position among health services nationally. It's designed to be a flexible project that understands the evolving nature of the reality we live in, particularly regarding sustainability and climate change.

## Objectives

1. Embed sustainability as a core aspect of our business	2. Create a clear path to achieve Net Zero Emissions by 2050	3. Incorporate climate change action as part of our corporate responsibility	4. Continuous discovery and innovation
---	---	---	---

## Focus Areas

1.1 Sustainability system	2.1 Detailed operational performance analysis	3.1 Sustainability roadmaps for all directorates	4.1 Measured and trackable performance improvement
1.2 Training & education	2.2 Supply chain emission assessment	3.2 Staff and community consultation	4.2 Integrated reporting system
	2.3 Develop and implement a Net Zero Emissions strategy		4.3 Sustainability and climate change research

This approach provides a pathway of responsibility and accountability for all areas to implement the required change. This will be chiefly lead by a newly formed Sustainability Task Group consisting of experts in their respective areas of operations. Their task is to understand the existing links between the different directorates and how performance is influenced by these intricacies as sustainability implementation progresses.
